

OGWA HYDROCARBON SITE MANAGEMENT WORKSHOP

VENDOR PAGE

Create the vendor booth
experience in a virtual
environment.

Coming January 2021

Aestus

Aestus works collaboratively with clients to develop ultra-high resolution conceptual site models that enable more efficient and cost-effective environmental site clean up. Watch this intro video below to get a preview of our services. (App users: select "Launch External Tool" to begin the video)

Better Data, Better Results

GeoTrax CSM+™ for a Better Conceptual Site Model

Too many environmental sites cannot be cleaned up over the course of years or decades. This is because remediation efforts are based on inaccurate conceptual site models developed using low data density drilling data that was collected without the benefit of targeting.

The Aestus GeoTrax CSM+™ process for conceptual site model development combines our proprietary Aestus GeoTrax Survey™ non-invasive subsurface scanning technology and Aestus GeoTrax VIZ™ data integration and 3D visualization. This process integrates the scanning imagery and targeted client drilling data to generate ultra-high data density 3D conceptual site models that provide better data, allowing you to make better decisions.

The Aestus GeoTrax CSM+™ conceptual site model identifies hard-to-find contamination, zones of bioactivity, and impacts to surface water and sediments, and provides further insight on hydrogeology and contaminant flow paths. This detailed information results in faster site closure at lower cost.

Learn More About Aestus

Aestus GeoTrax CSM+™ combines ultra-high data density GeoTrax Survey™ subsurface imagery with targeted drilling data visualized in 2D, 3D, and 4D. Aestus GeoTrax CSM+™ can reduce site characterization timelines from years to months, typically reducing cleanup costs and timeframes as well. Visit the Aestus useful links and resources to read case studies, watch more informative videos and discover our project sites both nationally and internationally.

OGWA HYDROCARBON SITE MANAGEMENT WORKSHOP

VENDOR PAGE SECTIONS

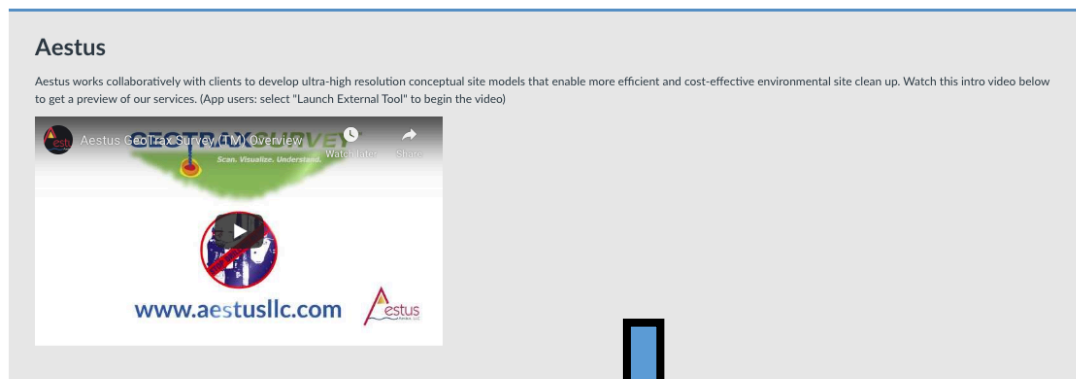

Each section provides the
opportunity to grab
participants' attention.

Coming January 2021

BANNER

A narrow, horizontal banner image to showcase your business.

ABOUT

This is the main info section. Post an engaging and informative video to connect with your virtual audience. It could be professionally made, or just a quick capture on a cell phone from a representative, welcoming guests to the vendor page. If you don't have a video or want to create one that's okay! Use this space to grab your audiences' attention with strategic, text-based information.

Better Data, Better Results

GeoTrax CSM+™ for a Better Conceptual Site Model

Too many environmental sites cannot be cleaned up over the course of years or decades. This is because remediation efforts are based on inaccurate conceptual site models developed using low data density drilling data that was collected without the benefit of targeting.

The Aestus GeoTrax CSM+™ process for conceptual site model development combines our proprietary Aestus GeoTrax Survey™ non-invasive subsurface scanning technology and Aestus GeoTrax VIZ™ data integration and 3D visualization. CONTACT

There are three components to this section, but only the “contact us” is required. Post an image of the representative “attending” the conference to connect the participants with a real person. The chat section is available for scheduling group or individual video conferences. The swag section is meant to replicate the tradition of vendors handing out memorable swag at the vendor booths. You can give swag to all who contact you, or you can enter the guests into a raffle for an ultimate prize.
